912E

All Bryant humidifiers are designed for easy installation and quiet operation with heat pumps as well as upflow, downflow, or horizontal furnaces. Humid air is circulated throughout the home by the central heating system. All Bryant humidifiers are equipped with a humidistat to maintain the desired humidity level. Access to the media pad in the humidifier is convenient and tools are not required, allowing easy pad replacement.

The fan-powered humidifiers, Model 913B and 913C, are designed for simple installation on supply ductwork, without a bypass duct required. Humidity is achieved by drawing heated supply air through a wet media pad, by means of the humidifier's fan. The 913B offers high evaporation rate, up to 25 gallons of moisture per day. For smaller, tighter constructed, or well insulated homes, the 913C can deliver up to 16 gallons of moisture per day.

The by-pass humidifiers, Model 912D and 912E, are designed for installation on the supply or return ductwork, by means of a bypass duct on a forced air heating system. Bypass humidifiers operate on the pressure differential between supply and return ductwork, bypassing heated supply air through the wet media pad, and back into the return air. The 912D offers up to 18 gallons of moisture per day with front bypass duct discharge. The 912E can deliver up to 17 gallons of moisture per day and has a reversible side bypass duct discharge.

The humidifiers mentioned are constructed of high-impact, Noryl thermoplastic to provide years of durability. Mineral buildup is reduced by continual flushing with fresh water. The water valves are low-voltage DC solenoid valves, offering quiet operation. The voltage is then rectified to AC for installation.

The Model 914A is rated up to 19 gallons of moisture per day and because of its no-drain construction, it is perfect for areas where hard water is not a problem. This Model is a bypass humidifier and is reversible for right or left duct runs. A rotating foam drum is operated by a synchronous motor and a float valve maintains the water level to keep the drum wet. An observation window allows for convenient visual maintenance checks.

SPECIFICATIONS

MODEL	912E	912D	913B	913C	914A

SERVICE TRAINING

Packaged Service Training programs are an excellent way to increase your knowledge of the equipment discussed in this manual, including:

- Unit Familiarization
- Maintenance
- Installation Overview
- Operating Sequence

A large selection of product, theory, and skills programs is available, using popular video-based formats and materials. All include video and/or slides, plus companion book.

Classroom Service Training plus "hands-on" the products in our labs can mean increased confidence that really pays dividends in faster troubleshooting, fewer callbacks. Course descriptions and schedules are in our catalog.
